PROFESSIONAL SUMMARY

Backend and DevOps-oriented Computer Engineering undergraduate with hands-on experience in containerization, Kubernetes orchestration, and AWS cloud deployments. Skilled in building RESTful APIs, implementing CI/CD pipelines, and deploying scalable cloud-native applications in production environments.

EDUCATION

National University of Science and Technology (NUST)

Bachelor of Engineering in Computer Engineering

Islamabad, Pakistan

Sept. 2024 – Sept. 2028

PROJECTS

Synthron – AI-Powered PC Builder Platform | *Django, PostgreSQL, Docker*

- Built a full-stack AI-powered platform generating optimized PC builds based on user budgets, use cases, and regional hardware availability.
- Containerized backend, frontend, and database services using **Docker Compose**, enabling consistent development and deployment environments.
- Implemented RESTful APIs with Django REST Framework and secure JWT-based authentication.

Cloud-Native Web Voting Application | *Go, MongoDB, Docker, Kubernetes, AWS EKS*

- Designed, developed, and deployed a cloud-native web voting application on **AWS EKS** using **Kubernetes**, leveraging Namespaces, Secrets, Deployments, Services, StatefulSets, and PersistentVolumes.
- Implemented backend APIs in **Go** with a **MongoDB replica set** for high availability, data persistence, and fault tolerance.
- Containerized all components using **Docker** and ensured secure management of sensitive credentials using Kubernetes Secrets.
- Gained hands-on experience in cloud-native architecture, **EKS orchestration**, and deployment of stateful applications at scale.

Todo List Application | *Django, PostgreSQL, Docker, AWS*

- Built a backend-driven to-do list application with full CRUD functionality and modular Django architecture.
- Dockerized application and database services to ensure portability and environment consistency.
- Deployed the application on AWS EC2 using Linux-based server configuration and Docker containers.
- Implemented a complete CI/CD pipeline using AWS CodeBuild, CodeDeploy, and CodePipeline for automated builds and deployments.

TECHNICAL SKILLS

Languages: Python C++, Java, SQL (PostgreSQL)

Backend: Django REST Framework, Go APIs

DevOps & Cloud: Docker, Docker Compose, Kubernetes, AWS EKS, EC2, ECS, CI/CD, GitHub Actions

Systems: Linux, Bash

Version Control: Git, GitHub
